Superior corrosion resistance for chain

RENOLD
Superior Chain Technology

Renold Hydro-Service

Superior corrosion resistance for chain

More and more applications demand chain that can withstand corrosion brought on by wash down or high moisture levels and the reassurance that the chain itself will not contaminate its immediate surroundings.

With conventional plating processes prone to chipping, flaking or peeling, there has to be a tough, durable solution that has all the right qualities. That's where Renold Hydro-Service® comes in.

Hydro-Service® is designed to resist corrosion and has been heavily used in packaging, bottling, food processing and wash down environments. Renold Hydro-Service® is treated with a mechanical zinc plating process with additional coatings applied for extra corrosion protection. The corrosion resistance of this coating in many wet, humid, saltwater or other moisture-related applications is far superior to standard nickel or zinc plating.

Unlike some products treated in a similar way for corrosion resistance, Hydro-Service® chain is hexavalent chrome-free, ensuring that it is safe and also environmentally friendly. This coating can be applied to standard or adapted, European (BS) or ANSI chain.

Remember, Hydro-Service® corrosion protection is available on roller chain, conveyor chain or leaf chain, European (BS) or ANSI, adapted or standard chain.

All components of the Hydro-Service® chain are treated prior to assembly in order to achieve full coverage and protection to all vital surfaces, not just external surfaces, ensuring a resistance to corrosion that's 30 times more effective than standard carbon steel chain. This helps to improve chain wear life and protect against corrosion-related pin and bush failures. Unlike conventional nickel or zinc platings, the Hydro-Service® treatment will not chip or peel. This extremely durable coating will continue to provide exceptional protection where other treatments fail.

Product features include:

- Excellent corrosion resistance
- Hexavalent chrome-free
- More than 30x the corrosion protection of conventional surface treatments
- No hydrogen embrittlement failures
- More economical than stainless steel chain
- Same strength and working load values as standard carbon steel chain

Potential Applications

- Saltwater environments
- Meat and poultry processing plants
- Vegetable processing plants
- Seafood processing plants
- Beverage plants
- Washdown equipment
- Outdoor applications

After 60 days of outdoor exposure, Hydro-Service® demonstrates the rust resistance that makes it the best choice for outdoor use.

After 14 days in and out of a 5% saltwater solution (equivalent to sea water) it can be seen that the Hydro-Service® coating will extend the chain life compared to conventional nickel plating or carbon steel in more challenging applications.
